CONSOLE

The screenshot shows a web browser's developer console. The top bar includes tabs for 'Öğeler', 'Konsol', 'Kaynaklar', 'Ağ', 'Performans', 'Bellek', and 'Uygulama'. The 'Konsol' tab is active, displaying a message 'İfade undefined'. Below this, a JavaScript function definition is shown, which includes a fetch call, a displayBlob function, and a displayURL function. The function definition is as follows:

```
> function displayURL(u) {  
  fetch(u).then(r => r.blob()) //call r.blob()  
    .then(displayBlob)  
    .catch(error=>msg.innerText=error.message)  
}  
function displayBlob(f) {  
  console.assert(f instanceof Blob);  
  let M = this;  
  
  console.log(f.name + " " + f.size + " bytes " + f.type);  
  if (f.type.startsWith("image")) {  
    RDR.readAsDataURL(f);  
    RDR.onload = ()=>M.displayImage(RDR.result)  
  } else if (this.isTextFile(f)) {  
    RDR.readAsText(f);  
    RDR.onload = ()=>M.displayText(RDR.result)  
  } else {  
    this.displayText(f.name + " -- Unknown " + f.type)  
  }  
}  
function displayText(txt) {  
  this.disp1.innerText = txt;  
  this.disp2.src = "";  
}  
function displayImage(url) {  
  this.disp1.innerText = "";  
  this.disp2.src = url;  
}  
}
```

At the bottom of the console, the message '< undefined' is visible.
