Sample code

```javascript
function init() {
  navigator.getBattery().then(b =>
      lev.innerText = 100 * b.level + '%'
    )
    navigator.getBattery().then(b => //Aşağıdaki kodla Aynı değil ilk başlangıçta bu
     chargeStat.innerText = (b.charging ? "Charging..." : "Discharging...")
    )
    navigator.getBattery().then(b =>
      b.onchargingchange = () => chargeStat.innerText = (b.charging ? "Charging..." :
    )
    navigator.getBattery().then(b =>
      b.onlevelchange = () => lev.innerText = (b.level * 100 + '%')
    )
    window.addEventListener("keydown", event => {keyboard.innerText = event.key
      if (event.key == "C" ||event.key =='c') {
        document.body.style.background ="cyan";
      }
      if (event.key == "W" ||event.key =='w') {
        document.body.style.background ="white";
      }

    });
    window.addEventListener("keyup", event=>{ keyUP.innerText=event.key
      if (event.key == "R"||event.key =='r') {
  document.body.style.background = "red";
  }
    })

    onlinestatus.innerText = navigator.onLine ? "connected--online" : "disconnected --
    window.addEventListener('online', event =>
    {onlinestatus.innerText = "connected -- online":}, false):
```
